PROFESSIONAL SUMMARY

Product-oriented fullstack engineer with 4+ years of experience in startup, public service, media, and small business contexts. Specialized in TypeScript and Node.js, building web applications and APIs used at scale, from design to production maintenance. Autonomous and proactive, with a strong focus on product impact, code quality, best practices, testing, and close collaboration with product and business teams. Proven ability to deliver end-to-end features, scale SaaS platforms, and drive engineering best practices.

PROFESSIONAL EXPERIENCES

Full-Stack Software Engineer - Freelance

Adtractive Group — *Lyon, France (full remote) — December 2025 to today*

Client operating several hundred digital advertising panels across France, seeking to integrate an embedded AI module (edge AI) into its screens to dynamically adapt displayed advertisements based on viewer demographics while collecting anonymized statistics via the existing Cloud platform.

- Designed the end-to-end technical architecture (Edge AI module, Player, RESTful API, AWS Cloud, Web Platform) for a dynamic ad targeting system deployed across hundreds of digital panels.
- Developed and integrated AI-driven ad delivery logic into the Player application, including real-time preloading, synchronization, and uninterrupted display management.
- Built backend and frontend features: AI feature management, demographic metadata, statistics endpoints, configuration interfaces, and client access control.
- Implemented a data pipeline for collecting and transmitting anonymized demographic data to the Cloud, and developed a dashboard to visualize targeting performance.
- Engineered a robust fallback system (error detection, latency management, broadcast continuity) and defined security and inter-module communication protocols (LAN, secured HTTP API).
- Authored technical documentation and provided strategic advisory on hardware feasibility.

Technologies and methods: React , Node.js , Express.js , RESTful API , MariaDB , AWS , Electron , Raspberry Pi

Full-Stack Software Engineer — Permanent Contract

Inicio — *Lyon, France (full remote) — January 2025 to December 2025*

Startup developing an algorithm to identify high-potential sites for photovoltaic projects through large-scale territorial analysis, and building a SaaS platform used by solar developers across Europe.

- Built an interactive map feature (Mapbox, GeoJSON) enabling users to visualize all electrical substations across France with key operational data, generating strong client enthusiasm and addressing a critical need for territorial exploration.
- Refactored the main product page architecture (frontend and backend) by decomposing a monolithic component into dedicated, single-responsibility modules with independent data fetching and error handling, reducing page load time from ~4s to near-instant.
- Introduced a built-in chat feature on product pages to centralize Sales-client communications, previously fragmented across emails, SMS, and spreadsheets, enabling per-client conversation tracking and full traceability of discussions.
- Implemented an event-driven notification system for the chat feature, building a modular backend service with multiple notification channels and AWS SES email delivery, improving user engagement and platform responsiveness.
- Delivered a self-service admin panel (backend endpoints + JetAdmin frontend with role-based access control), enabling the Sales team to autonomously onboard clients without engineering intervention.
- Tracked and improved technical KPIs (performance, security, stability, scalability) by implementing metrics and alerts via AWS CloudWatch and conducting incident analysis.
- Organized a weekly reading club around Software Craftsmanship (TDD, Clean Code) to foster best practice sharing within the team.

Technologies and methods: TypeScript, Node.js, NestJS, React, Jest, TypeORM, Docker, AWS, Cursor, JetAdmin, Hexagonal Architecture, monorepo

Full-Stack Software Engineer (Frontend-focused) — Freelance

Métropole de Lyon — *Lyon, France (hybrid remote) — March 2023 to January 2025*

Joined the development team of laclasse.com, a Digital Workspace (ENT) providing educational, collaborative and communication tools used daily by teachers, students, parents and non-teaching staff across public schools in the Lyon metropolitan area.

- Developed and improved features on an existing product.
- Created an App Store-inspired feature catalog to replace a hard-to-find, poorly structured application list, improving discoverability, UX, and adoption across educational establishments.
- Developed a multiple-choice grid field type for the platform's built-in form builder, expanding its quiz and exam creation capabilities and enabling teachers to design new question formats previously unavailable on the platform.
- Performed evolutionary and corrective maintenance.
- Collaborated closely with product and design teams.

Technologies and methods: TypeScript, Web Components, SQL, PHP, Docker

Full-Stack Software Engineer — Apprentice / Fixed-term Contract

Euronews — *Lyon, France (hybrid remote) — September 2021 to December 2022*

Pan-European multilingual 24/7 international news channel. Apprenticeship followed by a fixed-term contract within the Software Design and Development (SDD) team, responsible for building and maintaining internal tools, including the custom CMS used by journalists to write and publish articles on the Euronews website.

- Developed and improved features on internal tools and platforms.
- Developed backend APIs in Node.js (Express).
- Developed and validated a proof of concept for migrating from a local Elasticsearch instance to AWS OpenSearch by adapting backend services, replacing client libraries, and rewriting data connectors, delivering a proven migration path that the team subsequently used to execute the full production migration.
- Wrote Python scripts for migrating large data volumes (≈ 20 TB) to AWS S3.

Technologies and methods: Node.js , TypeScript , Express.js , Angular , Jest , Sequelize , AWS , OpenSearch , SQL , Python

Full-Stack Software Engineer — Apprentice

Synergies-Tech — *Saint-Priest, France (hybrid remote) — September 2020 to August 2021*

SME specializing in after-sales maintenance of automated mechanical systems, with an in-house mobile application enabling field technicians to complete and submit intervention reports in real time. Worked as the company's sole developer.

- Improved and maintained a business mobile application with ERP API integration.
- Developed and integrated custom modules for the open-source ERP Dolibarr.
- Administered systems and networks.

Technologies and methods: Vue.js , Sequelize , PHP , Hyper-V , Dolibarr

EDUCATION

Master of Science (MSc) in Technological Innovation (Bachelor +5)

Epitech
Lyon, France — 2020 to 2022

Bachelor's Degree in Computer Science (Bachelor +3)

Claude Bernard University Lyon 1
Lyon, France — 2019 to 2020

DUT in Networks & Telecommunications (Bachelor +2)

Savoie Mont Blanc University
Annecy-le-Vieux, France — 2016 to 2018

TECHNICAL SKILLS

Languages

- TypeScript, JavaScript
- SQL
- Python

Backend

- Node.js, NestJS, Express.js
- RESTful API design and implementation
- PostgreSQL, MySQL, TypeORM

Frontend

- React, Next.js
- Vue.js, Nuxt.js
- Angular
- HTML5, CSS3, Tailwind CSS

Quality and Testing

- Unit tests (Jest), integration tests and E2E tests
- Clean Code (SOLID, KISS, DRY), Hexagonal / Clean Architecture
- Code review, pair programming
- Technical documentation

DevOps and Tools

- Docker
- AWS (CloudWatch, S3, EC2, SES)
- Git (GitHub, GitLab), Monorepo
- Linux environments

Methods

- Agile, Scrum (sprint planning, daily stand-ups, retrospectives)
- Cross-team collaboration (Product, Design, QA)
- Remote-first environments

LANGUAGES

French: native language
English: professional level (written and oral)
